

UNIVERSAL WHITE CEMENT ...A High Performance Custom Blend

MANUFACTURING AND DISTRIBUTION

Universal Blended White Cement is a high performance proprietary cement blend developed for the swimming pool industry. It contains a patented formula of natural and highly reactive pozzolans.

WHY POZZOLANS?

- Increased workability
- Extended finish times
- Decreased premature sets
- Reduction in alkali silica reaction
- Greater resistance to sulfate (salt) attack
- Reduced efflorescence
- Increased strength and durability

Our pre-blended summer and winter mixes were designed with set times at different temperatures in mind to make them easier to work with and more durable.

Our Summer Blend is an installer favorite and a perfect solution for the hot summer season with a blend of pozzolans for increased workability as well as durability. The pozzolans help hold the pebble in place during the exposure process. The pozzolans reduce ASR and improve the surfaces resistance to chemical attack from aggressive water chemistry. The pozzolans also slow the set time, giving an additional 15 to 20 minutes of work time before the cement sets, allowing for improved quality during the hot summer.

Our Winter Blend uses less pozzolans than the summer cement for a quick set time in colder temperatures, yet it exhibits many of the positive qualities of our Summer Blend.
